

PPS One

RCS IT offers an overall solution: SAP Business One with PPS One. It is the ideal tool for small businesses and midsize production companies.

RCS IT presents PPS One

SAP Business One and the production module PPS One creates a complete overall solution which in a simple way and efficiently finds the newest information about the company on all areas. The overall solution SAP Business One can be adjusted individually for your company or the standard package can easily be integrated from day 1.

SAP Business One with PPS One covers all the financial needs in relation to:

- » Purchase
- » Sale
- » Controlling and report system
- » Data management
- » Production
- » Stock
- » Finishing montage
- » Sales force automation

Good Reasons

1. Short implementation time ensures that you do not waste your time.
2. The product can be adjusted to suit your needs.
3. The price ensures you return on investment.

The advantages by using SAP Business One with PPS One are that:

- » The implementation time is very short and the module has a logical and manageable interface
- » It offers sales support. For example with integrated CRM-functionality and with a sales pipeline and a graphic review
- » The system is adjustable and can be extended all the time
- » It contains standard interfaces for internal and external data sources, interfaces for other analysis programs as well as the possibility for integration with SAP's other products.
- » The budget will be respected and you will achieve return on investment fast
- » It is adjusted to the company's demands
- » It has an intelligent data concept with drag & relate
- » It carries out transactions in foreign currency
- » There are dynamic links for Microsoft Office applications
- » There is an assistant for report reading
- » There is a security of investment because of SAP's focus on innovation
- » Because of RCS IT's cooperation with small and midsize companies we recognize their needs

A complete integrated and flexible IT- solution

If your company wants to follow the market it needs a complete and flexible IT solution which ensures a fast access to all important and actual information about the status of your operations.

Can a product be produced in the desired time and are the necessary resources such as material, machines and work capacity available during that time?

SAP Business One delivers a quick answer with a clear review of the resources of the company.

PPS One can be used together with article -, stock - and address administration from SAP Business One and can be adjusted to fit the company without renouncing the advantages of the standard solution. Apart from that it can perform complicated work with cost places. For instance register groups and service at more machines.

SAP Business One with PPS One can also:

- » Work out service calendars and work time models
- » Define projects as “customer”, “development project”, “product group” and more.
- » Show a calendar of cost places, updates and a calendar year can be opened in unlimited numbers. Aside from that the planning horizon can stretch over several years.
- » Register articles and work schedule
- » Show information supplement, status for the operation plan, information about individual customers in the user fields, notes you create, add, copy or insert
- » Search in master data and article master data
- » Carry out scripting
- » Transfer material/ unit lists positions for work processes
- » Make positions for work processes
- » Carry out structure adaptation
- » Copy work schedule
- » Utilize structure parts
- » Make a budget calculation, diverse precalculations, structure unit lists and precalculate supply sizes.
- » Seek out production orders and show them in regards to many different criteria
- » Choose and copy an existing production order for registering of a new production order
- » Control timing of a production order
- » Show a graphic summary to control and survey the production orders
- » The arrow icon gives access to information
- » Show and print out characteristics
- » With the disposition function you can change the values for material and unit list position
- » Set up shopping purchases directly in SAP Business One
- » Change the hours and quantity of production at any time
- » Show report generator
- » Contain week schedule for cost places and a summary of capacity utilization
- » Can also be integrated with RCS Come/Go/Job/Time
