RCS Job App

RCS has developed a Job App that can be custom made to serve your needs.

RCS IT presents the RCS Job App

RCS Job App is created for manufacturing companies. RCS Job App is a ShopFloor solution for production planners and operators.

Here the planners get a complete overview of production orders, processes and status. This ensures effective planning.

Your operators always have an updated overview over their work tasks now and later. Operators can see a prioritized overview of ongoing and waiting orders. Under each job there are job descriptions and all the information they need for the job.

The RCS Job App is an add-on module for SAP Business One. It is a fully integrated solution.

With the RCS Job App you can see

» A complete overview
» Operators always know what to do next
» Operators always have necessary drawings, notes, job descriptions, etc.
» Ensure efficient production

3 Good Reasons

1. Operators will enter process and status in the system themselves.
2. You get a unique overview of the entire production.
3. Works everywhere with internet access.
