

# Subscription module

RCS IT has created a Subscription module, which provides a greater overview of the subscriptions that have been sold.

## RCS IT presents Subscription module

In SAP Business One, service contracts are created for subscriptions automatically. If the company sells software, there is e.g. one-year warranty on the software. In the subscription module, it can be increased, among other things, after all the service contracts that must be re-invoiced.

### In Subscription module you can:

- » Search for service contracts to be rebilled
- » Create a new service contract and a new invoice for the customer by re-invoicing
- » Ensure that no one subscribes is expired. Eg. by using the subscription module once a month

## Good Reasons

1. You avoid losses and late payments because you easy and simple can search for the service contracts that must be re-invoiced.
2. You can quickly see if subscriptions have expired.
3. The company gets an overview of how many subscriptions have been sold.
